

Intersurgical Diving grade soda lime products

Intersurgical produce various grades of carbon dioxide absorbent for diving applications. These include 4 to 8 mesh and 8 to 12 mesh products, both indicating and non-indicating.

All diving grade absorbents produced by Intersurgical, undergo routine quality control testing to ensure they meet the requirements of the NATO test standard STANAG No 1411. Each batch of diving grade soda lime is supplied with a quality certificate, stating conformance to the above standard.

All diving grade absorbents have also undergone performance testing to ensure compliance with the European standard EN14143.

For more information on Intersurgical's diving grade soda lime products please contact
